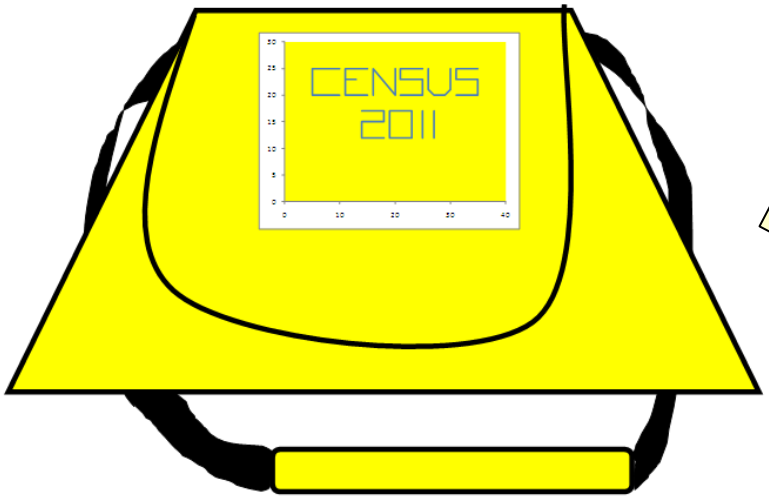
Design your Census Bag

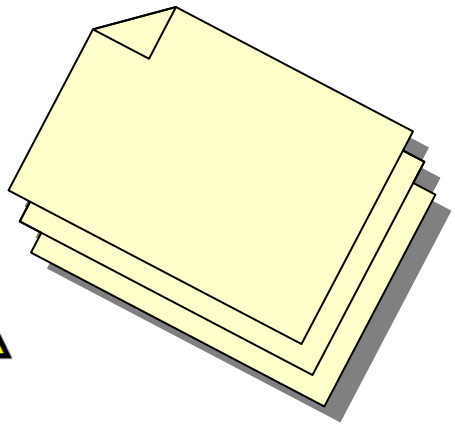
In this activity you are going to follow the steps to make a Census 2011 logo. When you have made the logo you are to design a collector's bag that you can paste the logo onto.

Remember the bag should be:

- waterproof,
- easily seen in the dark,
- comfortable to wear and
- roomy enough to carry a large number of census forms.

You can design your bag by hand or by using the Draw menu in a Word document.





On a sheet of graph paper
Rule up a set of axes.
Horizontal axis is from 0 - 40
Vertical axis is from 0 - 30.

To draw the shape begin with ordered pair (10, 25) and plot a point onto your axes.
Plot each next point by going down the list.

If you come to an empty cell - take your pen off the picture and start with the next point.

It is a good idea to join each point to the next so you can check your drawing as you go.

When you have finished draw a bag around the logo.
